

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) An apparatus for recording comprising:
means for receiving a source signal having associated
first play time information;

means for generating a ~~recorded~~ recording signal from the
source signal, the ~~recorded~~ recording signal comprising at least a
portion of the source signal including a recording discontinuity
with respect to the source signal; and

means for generating second time information for the
~~recorded~~ recording signal in response to the first play time
information and the recording discontinuity; and

storage means for storing the recording signal together
with the second time information.

2. (Currently Amended) The apparatus for recording as claimed
in claim 1, wherein the second time information comprises markers
indicating events in the ~~recorded~~ recording signal.

3. (Currently Amended) The apparatus for recording as claimed
in claim 2, wherein the second time information comprises a play
list comprising the markers.

4. (Currently Amended) The apparatus for recording as claimed in claim 1, wherein the second time information comprises event descriptors.

5. (Currently Amended) The apparatus for recording as claimed in claim 4, wherein the means for generating the second time information is operable to generate time information of the event descriptors by modifying time information of event descriptors associated with the source signal.

6. (Currently Amended) The apparatus for recording as claimed in claim 5, wherein the means for generating the second time information is operable to generate the time information of the event descriptors by compensating the time information of event descriptors associated with the source signal by a time gap associated with the recording discontinuity.

7. (Currently Amended) The apparatus for recording as claimed in claim 5, wherein time information of the event descriptors comprise relative time information associated with a play time line.

8. (Currently Amended) The apparatus for recording as claimed in claim 5, wherein said apparatus further comprising comprises means for extracting the event descriptors associated with the source signal from a transport signal comprising the source signal.

9. (Currently Amended) The apparatus for recording as claimed in claim 4, wherein the event descriptor comprises a stream event comprising information for triggering an application.

10. (Currently Amended) The apparatus for recording as claimed in claim 1, wherein the first play time information comprises a first play time line, and the means for generating the second time information is operable to generate a non-continuous play time line associated with the recorded signal and having a time discontinuity corresponding to the recording discontinuity.

11. (Currently Amended) The apparatus for recording as claimed in claim 1, wherein the source signal and the ~~recorded-recording~~ signal comprise Multimedia Home Platform (MHP) data.

12. (Currently Amended) The apparatus for recording as claimed in claim 1, wherein the source signal and the ~~recorded-recording~~ signal comprise Digital Video Broadcast (DVB) data.

13. (Currently Amended) A method of recording comprising the steps of:

receiving a source signal having associated first play time information;

generating a ~~recorded-recording~~ signal from the source signal, the ~~recorded-recording~~ signal comprising at least a portion

of the source signal including a recording discontinuity with respect to the source signal; and

generating second time information for the ~~recorded~~ recording signal in response to the first play time information and the recording discontinuity; and

recording the recording signal together with the second time information on a storage medium.

14. (Cancelled).

15. (Currently Amended) A record carrier comprising non-transitory computer-readable storage medium having encoded thereon a computer program comprising instruction to be loaded on a processor, said instructions causing the processor to perform the method as claimed in claim 1413.

16. (Cancelled).
